

SUMMARY

Offensive Security Engineer and Penetration Tester with experience identifying vulnerabilities across cloud services, web applications, and APIs. Currently a Security Researcher at Carnegie Mellon University's Upanzi Network, discovering vulnerabilities across government platforms, web, and network infrastructure. Passionate about security research, automation, and strengthening organizations.

SKILLS AND CERTIFICATIONS

- **Languages:** Python, C/C++, Bash, HTML, CSS, JavaScript, PHP
- **Offensive Security:** Penetration Testing (Network, Web and APIs), Cloud Security, Vulnerability Research, Exploit Development
- **Tools:** Nmap, Nessus, OpenVAS, Metasploit, Burpsuite, OWASP ZAP, Symantec AV, Elasticsearch, Symantec DLP, Docker, Kubernetes, Wazuh, Cyberark PAM, Wireshark, Security Onion
- **Frameworks:** OWASP Top 10, NIST, ISO 27001, GDPR, HIPAA, MITRE, PCI-DSS
- **Other Skills:** Leadership, Problem Solving, Collaboration, Communication, Team Player

EDUCATION

Carnegie Mellon University	July 2023 - May 2025
M.Sc. in Information Technology (Specialization - Cybersecurity)	CGPA: 3.80/4.00
University of Benin, Edo, Nigeria	March 2014 - May 2018
B.Sc. in Pure and Applied Physics	CGPA: 4.54/5.00

CERTIFICATIONS

Offensive Security Certified Professional (OSCP) (In-View)	Certified Ethical Hacker (CEH) Master
INE Junior Penetration Tester (eJPT)	AWS Certified Cloud Practitioner

SELECTED PROJECT

Agbragu, E.T., et al.(2025). "[Securing the Digital State: Redefining Cyber Defense for Public Digital Infrastructure.](#)" *Upanzi Network, Carnegie Mellon University Africa*, Kigali, Rwanda.

Endpoint and Network Protection - Implemented enterprise-wide data loss prevention solutions to protect against unauthorized data modification, disclosure, and destruction using Symantec DLP to enhance perimeter security monitoring and incident detection.

WORK EXPERIENCE

The Upanzi Network at Carnegie Mellon University · Kigali, Rwanda <i>Security Researcher</i>	June 2024 - Present
• Performed vulnerability research and conducted security assessments on government e-services, identifying vulnerabilities and providing actionable remediation, discovering over 400 confirmed vulnerabilities, including 150 high-severity issues such as security misconfigurations, SQLinjection, and XSS. • Engineered custom exploits to demonstrate vulnerability impact and validate security findings, ensuring accurate threat assessment and eliminating false positives across approximately 50,000+ tested URLs • Collaborated with cross-functional teams to validate findings and develop practical mitigation strategies aligned with organizational resources. • Developed formal security assessment reports aligned with OWASP Security Framework, presenting findings to technical and non-technical stakeholders, including government officials • Developed and co-authored a formal research report evaluating the accessibility and impact of digital government services, presented to technical and non-technical stakeholders	
Lumenave International Limited · Lagos, Nigeria <i>Cybersecurity Engineer</i>	April 2021 - June 2023
• Led security implementation projects within banking environments, ensuring compliance with strict financial industry standards • Deployed and monitored comprehensive security infrastructure incorporating IDS/IPS, including endpoint protection, anti-malware, and network monitoring, reducing malware infections by 40% • Oversaw smooth operations for all deployed cybersecurity solutions by providing onsite and offsite technical support, resulting in 100% of the operational efficiency of the security solutions • Reduced malware infections by 40% through implementing a multilayered security system incorporating IDS/IPS, antivirus, anti-spam, anti-spyware, and network monitoring to improve the overall network infrastructure. • Lowered the rate of phishing clicks and attacks by 25% by educating end users on cybersecurity best practices. • Strengthened organizational defenses through firewall management, vulnerability assessments, and server security audits.
